

The school register, *finally* worth trusting.

One system for admission, attendance, fees, examination, payroll and every parent message — with an AI that reads your school's own numbers and tells you what needs attention today. Built for Indian schools running JAC and CBSE side by side.

1

2

boards, one instance

63

tables of real school data

BENEFITS • लाभ

What the school actually gains

Not features. The things that change on Monday morning.

Fees stop leaking

Outstanding is aged into 0–30, 31–60 and 60+ day buckets. The 60+ bucket is the one schools never collect — the system names it, and chases it on its own at D-5, due day, D+3, D+7 and D+15.

recovers the 60+ bucket

Attendance in under a minute

Scan the QR on each ID card, or tap names on a grid. Absentee alerts go to parents the same morning — only for students newly marked absent, so re-saving never double-messages a family.

~40 sec per section

No student slips through

Attendance, fee ageing and result trend combine into one risk score per student. Both boards need 75% attendance to sit the exam — the system flags a child in September, not in February.

flagged early

A wrong entry is not a fight

Every change is logged with what the record looked like before and after, who did it, and when. Fee entries, attendance and invoices can be undone for 24 hours — the original entry stays in the log, marked reverted.

24-hour undo

Absent teachers, covered by first bell

Mark a teacher away and every period they were due to take appears as uncovered — computed from attendance and the timetable, not entered by hand. Free teachers are offered in order of how little cover they have already done, and can claim a period themselves.

before 8 a.m.

Parents stop calling the office

Attendance, fees, receipts, marks and notices are on the parent's phone. They can even message the school WhatsApp number and get an answer about their own child, instantly, without an app.

self-serve

Paperwork prints itself

Invoices, receipts, marksheets in each board's own format, payslips, admit cards and ID cards — all on the school letterhead with your logo, generated on demand.

8 documents

The month closes itself

Invoices for every student in one press. Payroll from attendance, with loss of pay calculated. A day book where every rupee in and out is one line, and an income-versus-expenditure view a trustee can read.

one press

Ask the school a question. In Hindi, if you like.

The AI is wired to the ERP's own data, not to a chatbot script. It looks things up, works out the answer, and can act — but anything that writes a record or messages a family stops and asks first.

Ask the AI operator

AI Console

Natural-language operator over the whole ERP — with a human gate on anything risky

Run the school by asking

Nisha, I can read every module, analyse trends, and act on your behalf. Anything that changes data or reaches a parent will show you a preview first.

Which students in the CBSE wing are below 75% attendance this month?

How is fee collection tracking versus last month, and what is causing the gap?

Send a fee reminder to every JAC wing family overdue by more than 30 days

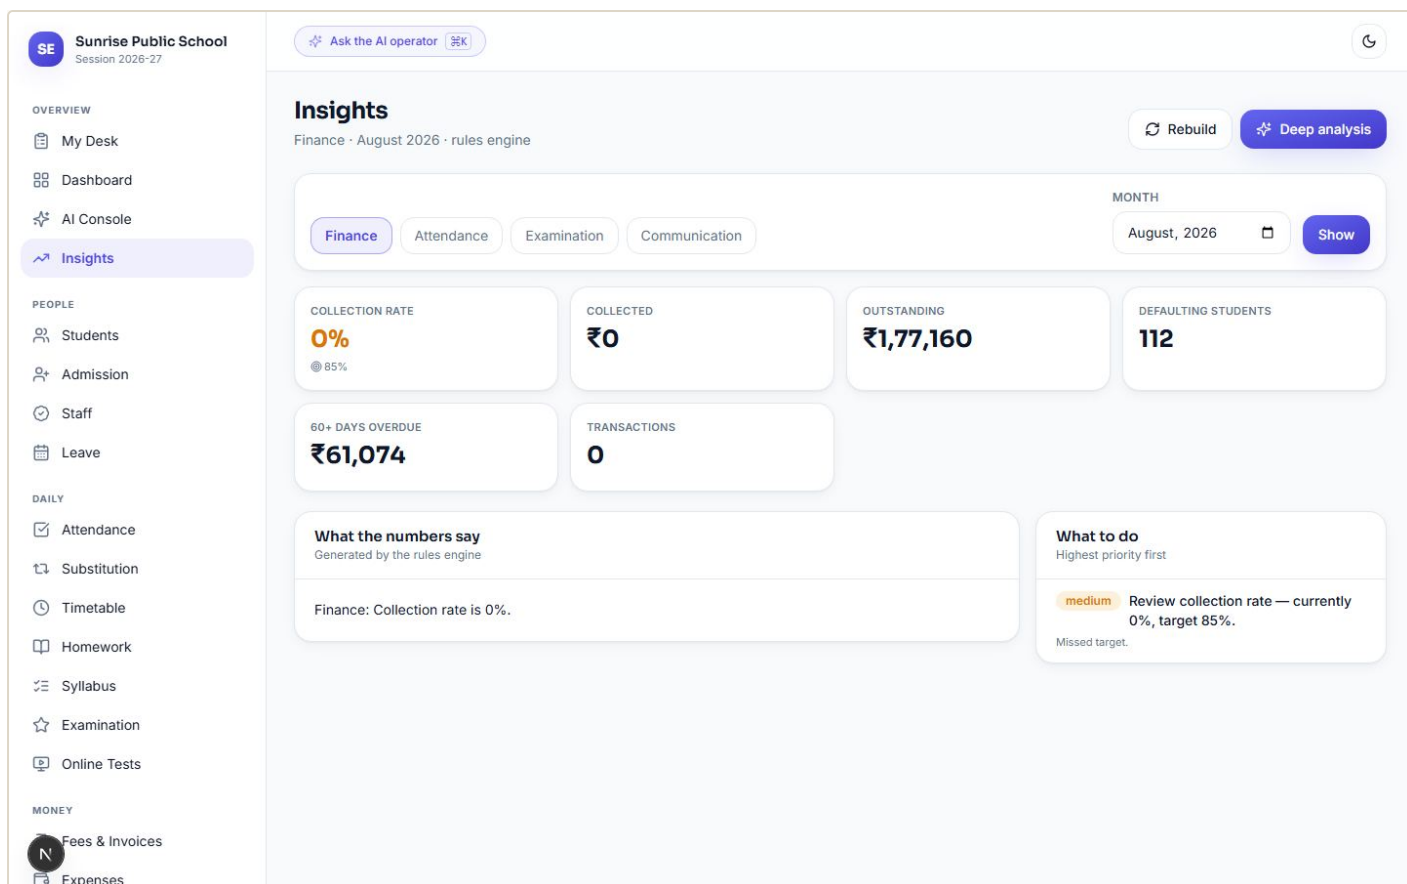

Generate this month's invoices for Class 9 CBSE

Show me the five students most at risk of dropping out and why

Autonomy for your role: can change data and message parents

Ask anything, or tell the ERP what to do...

02 Ask in plain language. The console shows which records it consulted to answer.

03 Monthly analysis per department, with the unusual months flagged against twelve months of history.

It asks before it acts

Reading data needs no permission. Changing a record or messaging parents produces an approval card stating exactly what will happen — "message 112 guardians about ₹1,77,160 of outstanding fees". Nothing moves until a human presses approve.

Its reach follows the person

The accountant's AI can raise invoices but cannot mark attendance. The class teacher's can mark attendance for their own sections only. A broadcast to more than 25 families always asks, whoever is driving it.

A DAY AT THE SCHOOL · स्कूल का एक दिन

Where the hours actually go

06:00	System	Fee reminders go out on their schedule. Late fines applied. Overdue library books flagged. Stale payment links expired.
07:45	Head of department	One message listing every period with no teacher today — not eight separate alerts that get muted.
08:10	Class teacher	Opens My Desk: today's periods, which sections still need attendance, whose marks are pending, and the students in their own class who need watching.
08:20	Parent	Gets an absence alert on WhatsApp before the second period starts.
11:30	Accounts	Collects a fee, and the receipt PDF reaches the parent before they leave the counter.
20:00	Principal	One page: attendance, money collected today, new admissions, students at risk, messages still queued.

Every screen below is the working product

Real data from a 200-student demo school running both boards. Nothing here is a mock-up.

10 Students — searchable across both wings, with attendance, dues and risk on every row, and ID cards printed eight to a sheet.

Parents and students get their own app — no download

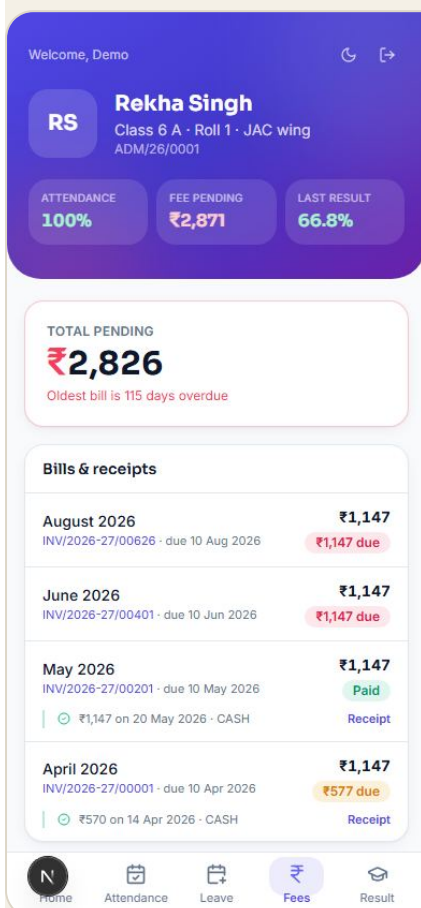

A separate product, not the staff screens shrunk down. Thumb-reachable, and every number stated the way a parent says it — "₹2,871 pending", not "outstanding receivable".

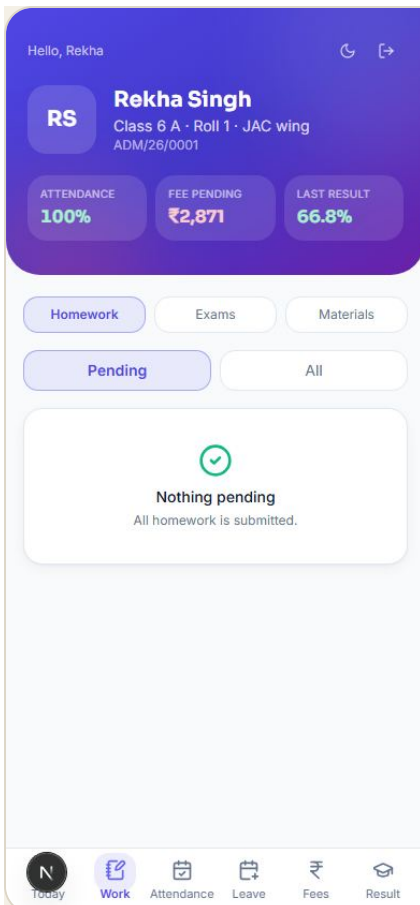

11 Attendance, dues and last result at a glance.

12 A month of attendance, day by day.

13 Every bill, with its receipt attached.

14 The student's own view — timetable, homework, online tests.

Leave, with the parent in the middle

A student applies, and it waits for their own guardian to confirm before the school ever sees it. A child cannot quietly book themselves a day off; a parent applying directly skips the step, because their consent was the thing being checked.

A doubt class the class votes for

One child stuck on a chapter is a conversation after the bell. Eleven children stuck on it is a class worth an hour — and until now no teacher had a way to tell those apart. A student raises the topic, the whole section can add themselves, and the teacher's queue is sorted by how many are actually waiting. Scheduling it takes one press, online or in school.

A parent sees only their own child

The student is resolved from the signed-in account, never from the web address.

Editing the link to another family's receipt returns a refusal, not a document.

MODULES · मॉड्यूल

- Broadcast with live count
- Two-way parent replies

WHY THIS ONE • यह क्यों

Four decisions most school software gets wrong

Two boards, one school

JAC and CBSE run side by side, not as two installations. Each keeps its own grading, pass rule, compartment allowance and marksheets format — a JAC child gets a Division, a CBSE child gets grade and CGPA, from the same button.

Messages that survive a bad network

Nothing sends inline. Every message queues, retries three times with backoff, and falls back from WhatsApp to SMS to email — but never sends the same notice twice. A daily cap means no bug can ever spam three hundred families.

Online tests you can trust

The clock lives on the server, so changing the phone's time buys nothing. Correct answers never reach the browser while a paper is open. Tab switches are counted and shown to the teacher — but never auto-punish, because a phone notification should not fail a child.

Money is never silently wrong

Online payment is marked paid only by a signature-verified message from the bank's gateway — reloading a success page settles nothing. Reversing a receipt needs a higher permission than collecting one, and every reversal is logged.

THE PRACTICAL DETAILS • व्यावहारिक जानकारी

What it needs to run

ITEM	DETAIL
Access	Any browser. Nothing to install — staff on a laptop, parents on a phone.
Roles	Eleven, from principal to gatekeeper. Each sees only their own modules, checked on the server every time.
Documents	Invoice, receipt, marksheet (both boards), payslip, admit card, ID card sheet, reports as PDF and Excel.
Your branding	Upload the school logo once; it appears on every document, with a watermark on money papers.
Data	Your existing student and staff lists import from a spreadsheet. Bad rows are shown before anything is written.
WhatsApp & SMS	Connects to your own WhatsApp Business number and SMS account. Until then the system runs and queues normally.
Online fees	Razorpay. Parents pay from a WhatsApp link; the receipt issues itself once the bank confirms.

NEXT STEP • अगला कदम

See it running on your own school's data

Send one class list and one month of fee records. Within a few days the system is loaded with your own students, your own defaulters and your own timetable — and you can judge it on figures you already recognise, not on a demo school.

Walkthrough takes about 30 minutes, on a call or in person.

Y

Yuktantra

Vidyalaya ERP is designed, built and supported by Yuktantra — the software studio behind it. You deal with the people who wrote the code, not a reseller and not a call centre. Changes your school needs get built, not filed as a feature request.
